

Student: _____ Date: _____

To use this data record, take data on each individual trial in which you present an opportunity to respond to your student. Enter goals to be addressed with CPRT in the spaces provided, and define easy and hard tasks for each goal. In each trial column, indicate whether you targeted an easy or hard task, the child's response, and the support level used (if any; you may also just make a mark in the support box if you are not gathering support-type information). At the end of the session, calculate the total number or percent of hard task trials in which the child responded accurately and independently (number of hard task trials correct and independent/total number of hard task trials), depending on what is being measured. Enter this information at the top of each box. Use the Comments section to indicate any important information about that particular goal, such as difficulty with maintenance skills or helpful materials or overall impressions from the session, including student affect, motivation level, and inappropriate behaviors.

Response:

+: Correct response

Att: Attempt toward correct response

-: Incorrect response

NR: No response

Support Level:

F: Full or P: Partial

Support Type:

Ph: Physical, V: Verbal, Vs: Visual, G: Gestural
